## A Casebook of Ethical Challenges in Neuropsychology (Studies on Neuropsychology, Development, and Cognition)

The American Psychological Association published a revision of the Ethical Principles of Psychologists and Code of Conduct in 2002. This text, a companion to the 2002 text *Ethical Issues in Clinical Neuropsychology* by Bush and Drexler, presents the reader with common ethical challenges in neuropsychology. This text examines the differences between the 1992 and 2002 APA Ethics Codes as they relate to neuropsychological activities.

The authors present cases and discuss ethical issues related to neuropsychological practice with a variety of patient populations and in a variety of clinical settings. In addition, ethical issues in neuropsychological research and test development are examined. The text also includes chapters on emerging and particularly challenging aspects of neuropsychological practice, such as the assessment of response validity, and the use of information technology and telecommunications. Through the use of case illustrations, the authors examine ethical issues in neuropsychology and the new Ethics Code, offering a practical approach for understanding and promoting ethical neuropsychological practice.
